Activity Diagram In Software Engineering

The Activity diagram in the software design models is used to represent the flow of control among the different activities of the software. In the activity diagram, we represent different actions through activities. These activities take some input from some other activity of the system or through the input and output units and produce some signal outputs that control the workflow of the other activities.

Within an activity diagram there are many key modelling concepts, here is a select main few of them: An activity represents an action or a set of actions to be taken. This is a control flow. It shows the sequence of execution.

Software Engineering - Activity Diagrams | Computer ...

An activity diagram visually presents a series of actions or flow of control in a system similar to a flowchart or a data flow diagram. Activity diagrams are often used in business process modeling. They can also describe the steps in a use case diagram. Activities modeled can be sequential and concurrent. In both cases an activity diagram will have a beginning (an initial state) and an end (a final state).

An activity diagram is used by developers to understand the flow of programs on a high level. It also enables them to figure out constraints and conditions that cause particular events. A flow chart converges into being an activity diagram if complex decisions are being made. Brevity is the soul of wit.

Unified Modeling Language (UML) | Activity Diagrams ...

Activity diagrams are graphical representations of workflows of stepwise activities and actions with support for choice, iteration and concurrency.

What is Activity Diagram? - Visual Paradigm for UML

UML Activity Diagrams is a special case of a statechart diagram in which all of the states are action states and the transitions are triggered by the completion of actions in the source state. Use an activity diagram to describe the internal behavior of a method and represent a flow driven by internally generated actions.
