Remember from Chapter 6, "The Skeletal System," that tendons are fibrous tissues that usually attach skeletal muscle to bones and that ligaments attach bone to bone? Note that some muscles can attach to a bone or soft tissue without a tendon. Such muscles use broad sheets of connective tissue called aponeuroses.

## Central Bucks School District / Homepage

Bone, or osseous tissue, is a hard, dense connective tissue that forms most of the adult skeleton, the support structure of the body. In the areas of the skeleton where bones move (for example, the ribcage and joints), cartilage, a semi-rigid form of connective tissue, provides flexibility and smooth surfaces for movement. The skeletal system is the body system composed of bones and cartilage ...

Skeletal muscle wasting occurs in a variety of diseases including diabetes, cancer, Crohn's disease, chronic obstructive pulmonary disease (COPD), disuse, and denervation. Tumor necrosis factor  $\alpha$  (TNF- $\alpha$ ) is involved in mediating the wasting effect. To date, a causal relationship between TNF- $\alpha$  signaling and muscle wasting has been established in animal models.
