Gene Therapy Vs Genetic Engineering

Gene therapy seeks to alter genes to correct genetic defects and thus prevent or cure genetic diseases. Genetic engineering aims to modify the genes to enhance the capabilities of the organism beyond what is normal. Ethical controversy surrounds possible use of the both of these technologies in plants, nonhuman

...

Gene therapy has been defined as 'The introduction or alteration of genetic material within a cell or organism with the intention of curing or treating a disease' (Griesenbach & Alton, 2013). This can help improve the life expectancy of many people, and improve the condition under which people live.

Gene Therapy or Genetic Enhancement: Does It Make a ...

Gene therapy involves the replacement or modification of a genetic variant to restore or enhance cellular function or the improve response to nongenetic therapies. Genetic engineering involves the use of recombinant DNA techniques to introduce new characteristics or traits. In medicine, the goal of gene therapy and genetic engineering is to alleviate human suffering and disease.

GMO vs Gene Editing vs Genetic Engineering

Gene replacement therapy differs from gene editing in that it does not directly change, or edit, a person's DNA. Instead, a vector delivers a new, working gene into the nucleus of the cell where it can make the protein the body needs.
