Just make sure that when you're on Feedbooks' site you head to the "Public Domain" tab to avoid its collection of "premium" books only available for purchase.

### How To Remove Emissions And

Photosynthesis removes carbon dioxide naturally — and trees are especially good at storing carbon removed from the atmosphere by photosynthesis. Expanding, restoring and managing forests to encourage more carbon uptake can leverage the power of photosynthesis, converting carbon dioxide in the air into carbon stored in wood and soils.

Maryland's Vehicle Emissions Inspection Program (VEIP) is an important component of the State's plan to improve air quality. By requiring inspection of vehicle emission systems every two years and repair of vehicles that fail to meet emissions standards, VEIP significantly reduces vehicle emissions that contribute to Maryland's air quality problem of ground-level ozone.

### **Vehicle Emissions Inspection Program**

Scope 1 emissions are under the direct control of your organization, so the first step is to identify the major sources of your company's carbon emissions and measure your carbon footprint. A good way to prioritize your actions is to apply the carbon management hierarchy of Remove-Reduce-Replace-Offset to your major emission sources.
