1989. The new square bodies are virtually the same welder in different sheet metal. My guess is they stack better in school welding labs or industrial settings. There is a serial number break on the changed polarity switch with AC in the middle to DC+.

welders. I don't have a ton of money or room either. I've been looking at a couple of old IdealArc 250/250s from the 1980s. These seem to be generally well regarded, and at 140 amps DC or less have 100% duty cycle, which makes them enormously more usable than a buzzbox with its pathetic 20% duty cycle.

At an auction today we bought a Lincoln Idealarc 250 DC with stick leads, and a LN-7 GMA wire feeder. I've gone to the Lincoln site, downloaded the manual, and connected the welder to a 80A 220V line, it works great on the CC side, and we will be testing the CV output with the feed as soon as we can get a contact tip for the gun.
