My Solar System Lab Worksheet Answers [EPUB]

Our Solar System to Scale. In this lab
you will calculate the relative size of the
planets and the average orbital distance
they are from the sun. You will also
construct a scale diagram of the Solar
System using the size of the planets
their distance from the sun. Since the
distances between planets are so much
greater than their diameters we will
have to use two different scales.

Kepler showed that planets orbiting the sun and moons orbiting planets do not travel on circles, but on ellipses, with the central body at one of the two foci. The long axis of an ellipse is called the major axis. Half of the major axis is called the semimajor axis, which is usually denoted a . Kepler also showed that the time that it takes for a planet to orbit the sun or for a moon to orbit a planet—the orbital period, which is ...
