### Troubleshooting A 3y Toyota Engine

I am experiencing idling problems with a 3Y Engine (Brand new). The engine idles eratically between 1300 and 1700 rpm. She does not idle below 1300 rpm. She cuts out as soon as I slow down and the rpm drops, to stop at a robot. I have fitted a new manifold gasket, checked all hoses for vacuum leaks. I really do not know what could be causing this.

First put the interior heater on maximum heat. Run the engine up to working temperature and then squeeze all rubber hoses to help shift any trapped air. Top up the coolant if the level drops when air pockets have been shifted. The following sequence should occur when the engine is warming up. 1) When cold the engine has higher then normal revs.

The temperature of your Toyota's engine should be nice and consistent when you're driving, ideally half-way between "H" and "C". While the engine can run a little hotter or cooler depending on the driving conditions, it should never approach the "H" ...that's a sign of a problem that demands serious (and immediate) attention.
